Joomla! is a free open source framework and content publishing system designed for quickly creating highly interactive multi-language Web sites, online communities, media portals, blogs and eCommerce applications. Joomla! provides an easy-to-use graphical user interface that simplifies the management and publishing of large volumes of content including HTML, documents, and rich media. Joomla! is used by organisations of all sizes for intranets and extranets and is supported by a community of tens of thousands of users.

With a fully documented library of developer resources, Joomla! allows the customisation of every aspect of a Web site including presentation, layout, administration, and the rapid integration with third-party applications.

Joomla! now provides more developer power while making the user experience all the more friendly. For those who always wanted increased extensibility, Joomla! 1.5 can make this happen.

A new framework, ground-up refactoring, and a highly-active development team brings the excitement of 'the next generation CMS' to your fingertips. Whether you are a systems architect or a complete 'noob' Joomla! can take you to the next level of content delivery. 'More than a CMS' is something we have been playing with as a catchcry because the new Joomla! API has such incredible power and flexibility, you are free to take whatever direction your creative mind takes you and Joomla! can help you get there so much more easily than ever before.

Thinking Web publishing? Think Joomla!
